More than 50 years of experience
1st producer of drip pipes

WHO ARE WE ?

We are a pioneer in the production of irrigation pipes with more than 25 years of experience. We are specialized in the extrusion of drip pipes and flat drip : one of the most efficient water and nutriment distribution system.

ADVANTAGES OF DRIP IRRIGATION

- Precise and uniform irrigation with localized and continuous water supply which reduces evaporation due to runoff.
- Better yield thanks to the dripper that deliver the perfect amount of nutriments directly to the plant's roots.

DRIP PIPES

• AGRIGOUTTE

Presence of a **turbulent flow dripper welded to the interior wall of the pipe.**

The dripper is auto-cleaning thanks to a filter at its input. It's especially conceived to prevent clogging.

The combination of the flexible tube and dripper, inseparable and without joints, allows for easy installation as well as easy storage for reuse season after season.

| DIAMETER 20 MM | |
|-------------------|--------------|
| Debit (L/H) | Spacing (cm) |
| 4 | 75 - 100 |
| 8 | 75 - 100 |
| Self-regulating 4 | 75 - 100 |

| DIAMETER 16 mm | |
|-------------------|-------------------------|
| Debit (L/H) | Spacing (cm) |
| 2 | 25 - 33 - 40 - 75 - 100 |
| 4 | 25 - 33 - 40 - 75 - 100 |
| 8 | 75 - 100 |
| Self-regulating 4 | 33 - 40 - 75 - 100 |

• THE SMOOTH TUBE

Giving users flexibility in the positioning of the drippers.

- Diameter 16 mm (Ref. PET 16).
- Diameter 20 mm (Ref. PET20).

FOR BETTER WATER SAVINGS,

Drip irrigation system is the most suitable

experience in the extrusion field. and flat drips in Tunisia

FLAT DRIP

• AGRITAPE

This irrigation system consists of a thin extruded tube, **containing a continuous labyrinth** and wide welded passages along the length.

The presence of this strip reinforces the mechanical strength of the tube lengthwise.

Thanks to an internal filter and turbulent flow, the risk of cloggings is limited. The 10 cm spacing between each dripper creates a perfectly uniform humidification zone along the entire length.

• AGRILITE

This irrigation system consists of a **turbulent dripper welded to the surface**.

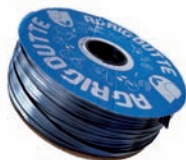

This dripper is equipped with a self-cleaning vacuum nozzle as its end, that minimize the accumulation of dirt.

Easy to bury and to install using simple automatic rolling machines.

AGRILITE AGRITAPE

BRING INNOVATION TO YOUR AGRICULTURE

Diameter 16 mm - Thick. 0,15 mm

Debit (L/H) Spacing (cm)

1,5L/H, 1 Bar 10 - 20

Diameter 16 mm - Thick. 0,15 mm

Debit (L/H) Spacing (cm)

2,5L/H, 1 Bar 20

AGRIGOUTTE

FITTINGS FOR IRRIGATION

WHY SHOULD YOU CHOOSE US ?

QUALITY, ECOLOGY, EFFICIENCY

• We offer a complete range of drip tube that meet all irrigation needs, whether its for vegetable, fruits or field crops.

• We offer technical advice to help farmers optimize the

efficiency of their irrigation systems.

• Our company pays attention to the quality of its products and satisfaction of its customers.

• Our commitment to innovation, quality and customer advice puts us at the forefront of this industry. We offer a product for the best value for money.
